Implemented Borda Healthcare RFID Solutions

PRODUCTS Hardware

We believe that what we offer to our customers and partners must be reliable and functional. To achieve that we have been researching, developing technology and proven products in order to stand behind them proudly. As a result, we have developed our own active RFID hardware and also cooperated with companies that we trust for Passive RFID hardware.

PRODUCTS Borda Lighthouse Software

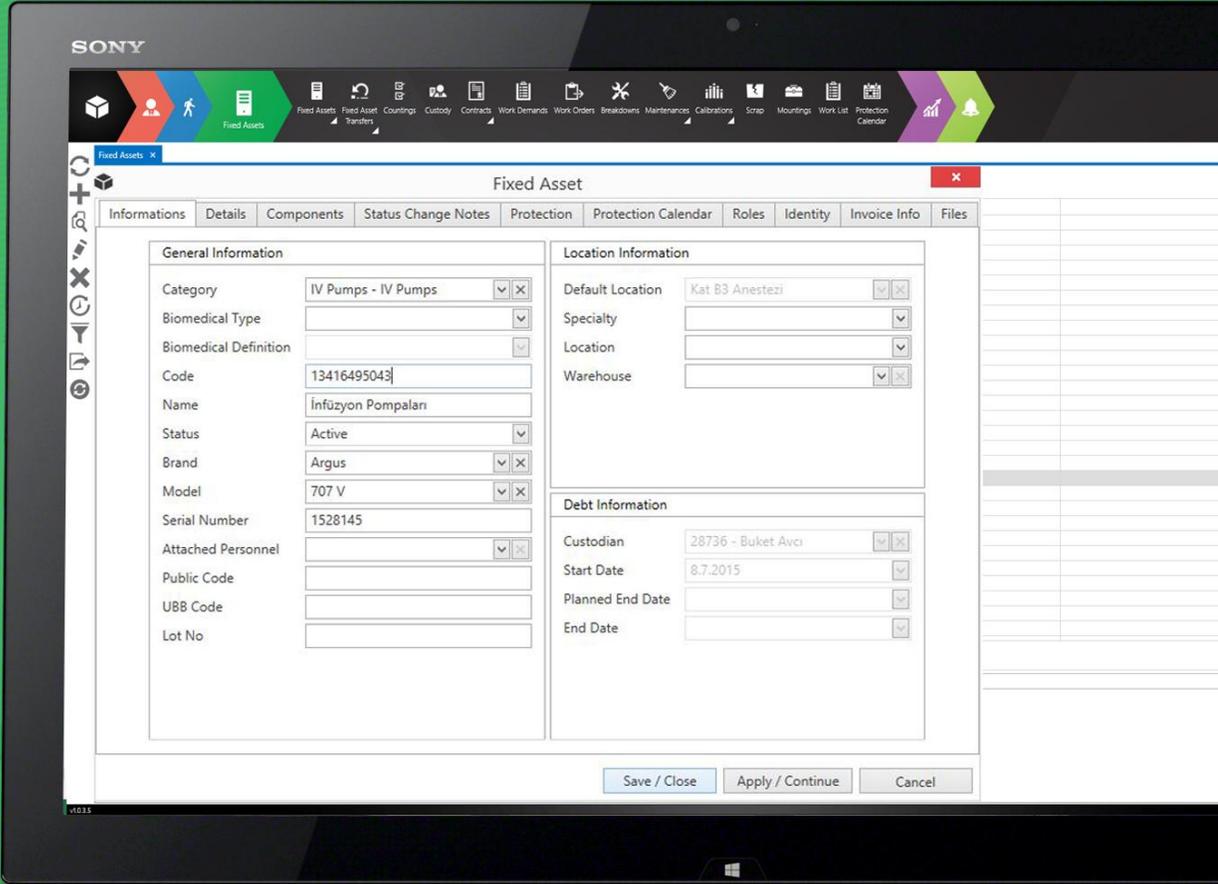

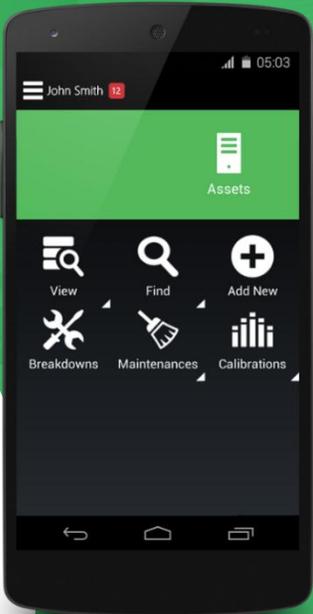

The powerful and useful platform must be created with a deep knowledge of business domain. It must also be beautifully designed, user friendly, flexible to customize according to needs. That make us design Lighthouse platform.

System Components

ASSET Management Solution

Location Tagging

- > All locations are tagged with RFID tags.
- > RFID tags are used in counting assets.
- > These tags enable the personnels to locate themselves easily.
- > These codes are used also in Central Helpdesk, to locate any request.

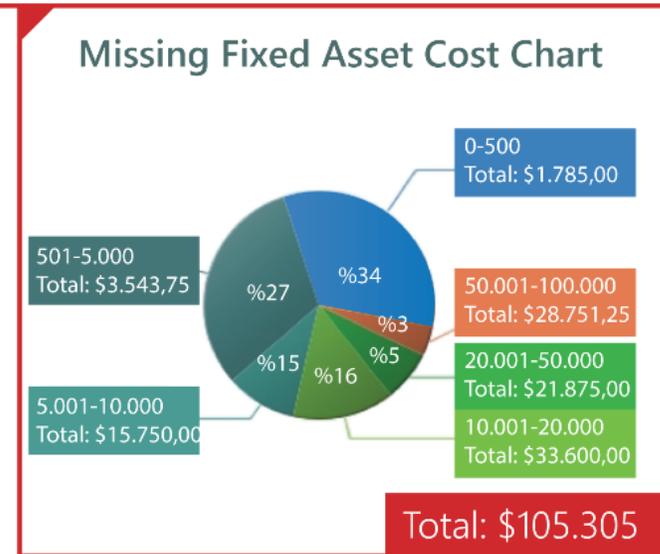

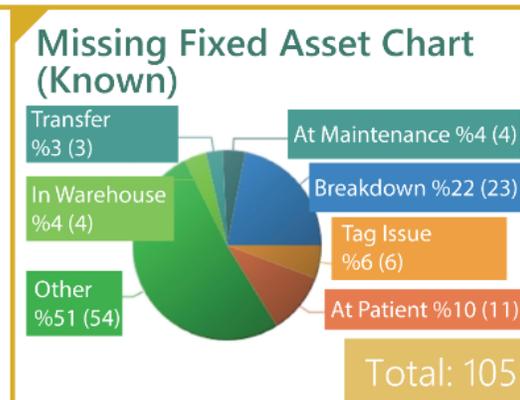

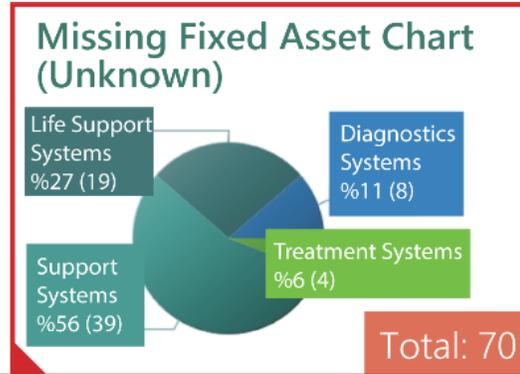

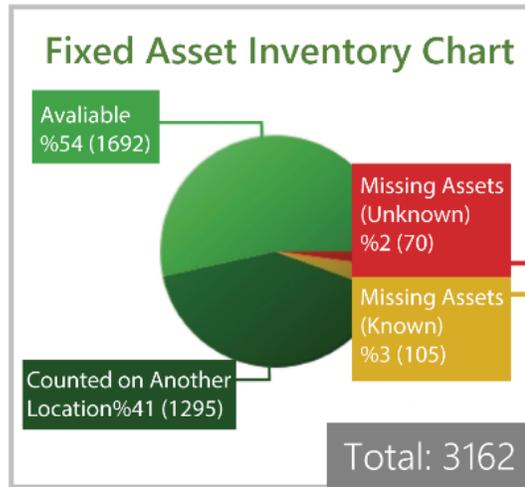

Counting operations are done very fast, planned and systematic

Asset inventory is monitored in room scale

Compliance with the regulations becomes easier

System Components

ZONAL Location Tracking

A large diagram illustrating the ZONAL location tracking system. It shows a 3D perspective view of a building with various rooms and zones. A central inset image shows a person in a wheelchair in a hallway. A circular callout on the right shows a person in a wheelchair with a red signal icon above them, indicating detection. The diagram is surrounded by an illustration of a city street with cars and trees.

This message was sent with High importance.
1258741 Wheelchair detected in FTR Main Exit

A central inset image showing a person in a wheelchair in a hallway, with a person standing nearby. This image is part of an email notification.

how it works

The presence of people and assets in the controlled zone is monitored

Unauthorized exit is detected

Asset inventory management becomes easier

- > Passive RFID checkpoints are located in 35 exit doors.
- > Each door has a flasher, which provides audiovisual alerts.
- > CCTV operators receive the alerts as a Lighthouse notification.
- > Custidians of the assets receive the alerts an e-mail.

- > Loss and stolen is prevented
- > Awareness of assets increases and overpurchasement decreases

System Components

REAL-TIME TRACKING Solutions

255
Active
Readers

1807
Locators

The Main Capability of The Solution

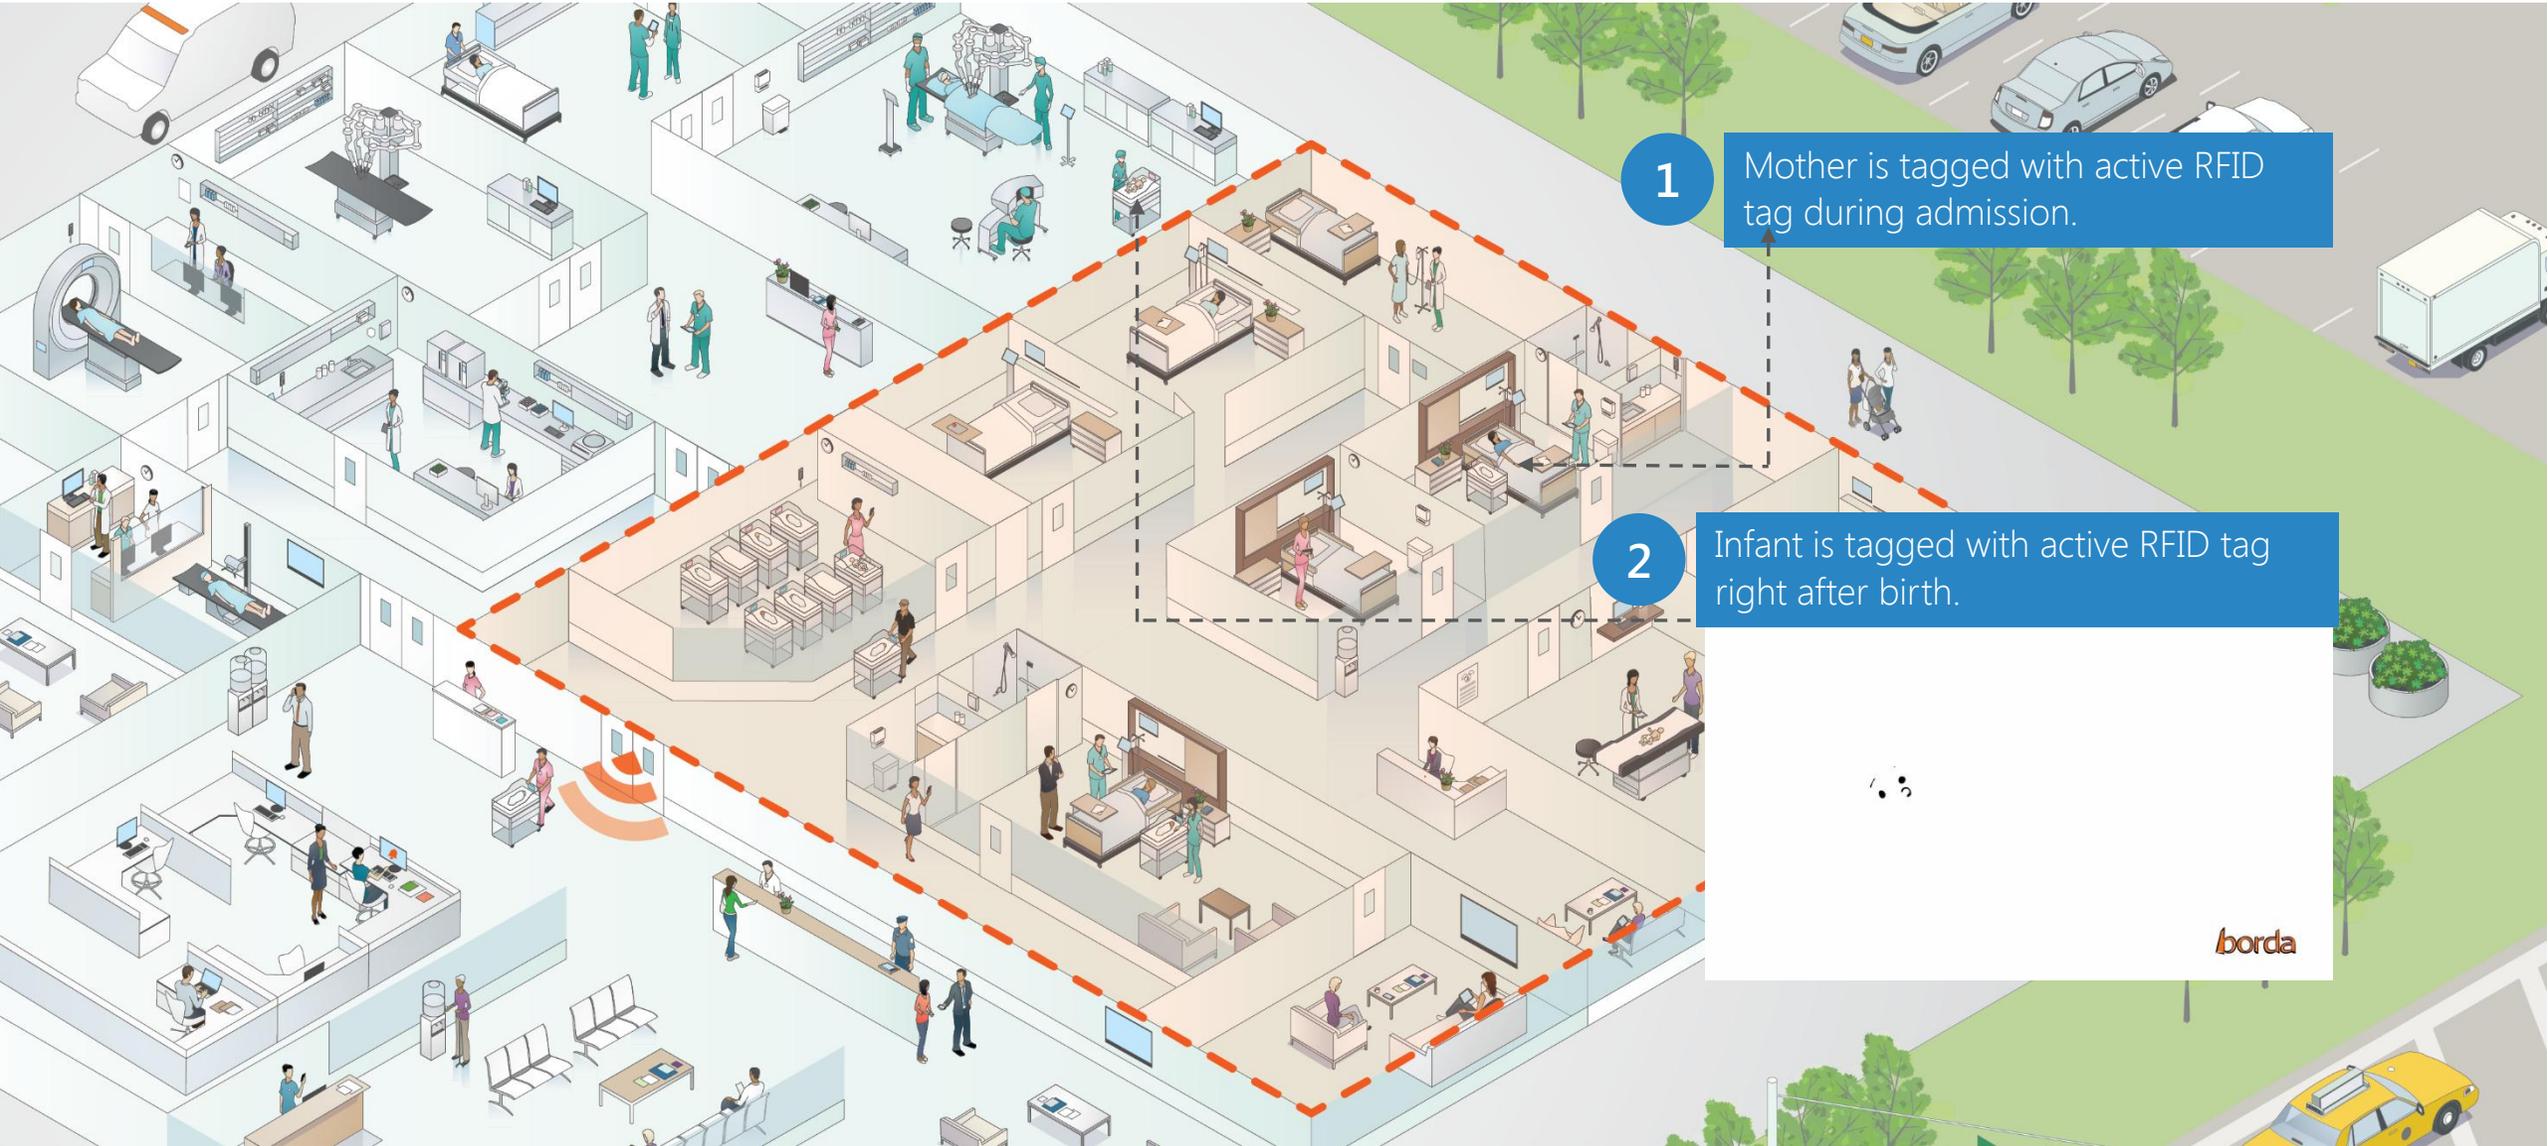

- Secure zones are created to detect unauthorized exit of the people and the assets
- Infant and patient kidnapping, also asset stealing attempts are detected
- The patient or personnel generates an emergency call

System Components

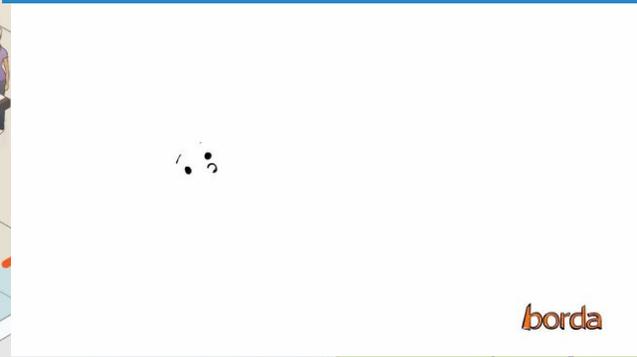

- > If an unauthorized surgery patient or mother is located at the exit zones, an alert is created.
- > Customized alerts are generated if it an impatient is unauthorized to leave his/her room.
- > These alerts notify CCTV operators, nurses and doctors.

RTLS - Infant Safety

1 Mother is tagged with active RFID tag during admission.

2 Infant is tagged with active RFID tag right after birth.

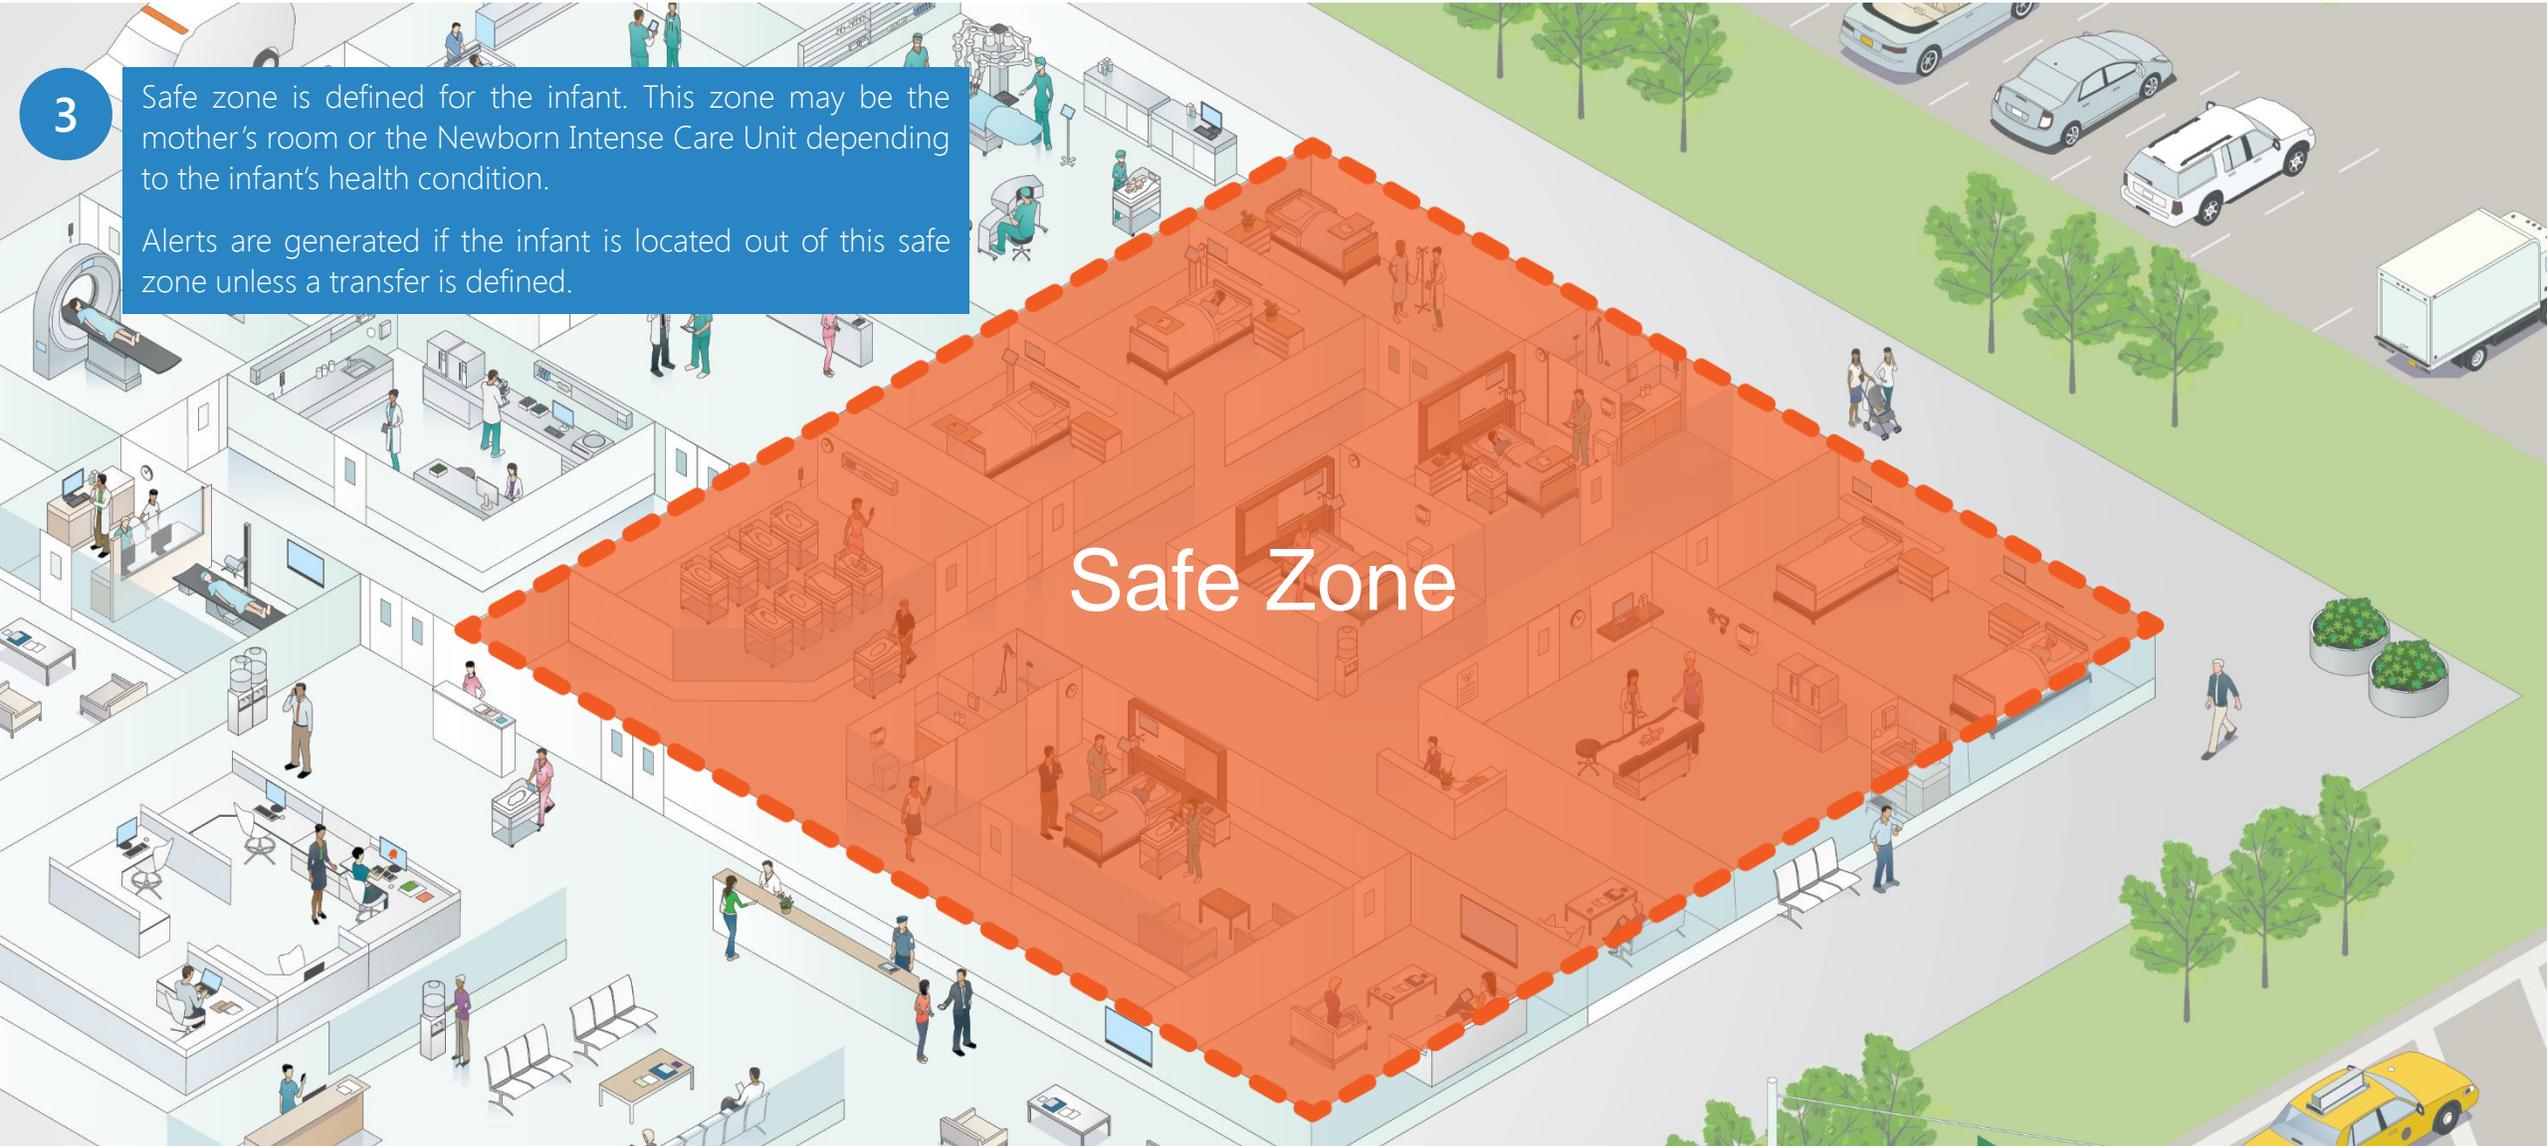

RTLS - Infant Safety

3

Safe zone is defined for the infant. This zone may be the mother's room or the Newborn Intense Care Unit depending to the infant's health condition.

Alerts are generated if the infant is located out of this safe zone unless a transfer is defined.

Safe Zone

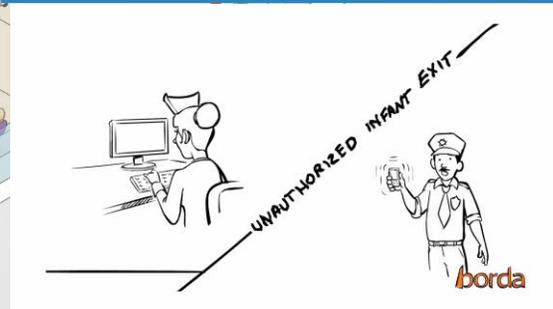

RTLS - Infant Safety

4 Room based locations of the mother and infant are tracked.

5 Infant may leave the safe zone only if transfer is defined with the authorized personnel

6 Alerts are generated and may be tracked on the software.

RTLS - Infant Safety

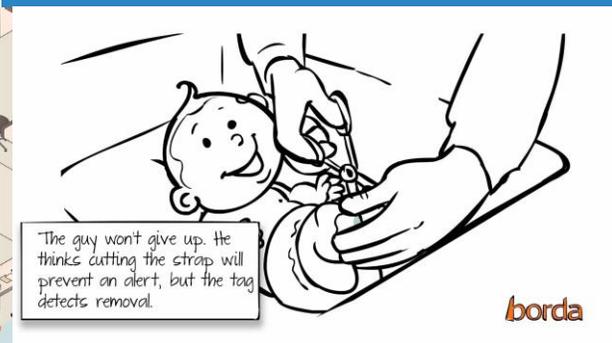

7 Alerts are generated as notifications on Lighthouse, Lighthouse Mobile, as SMS or e-mail.

8 With the BMS integration, the doors are locked automatically and audiovisual alerts are generated on flashers.

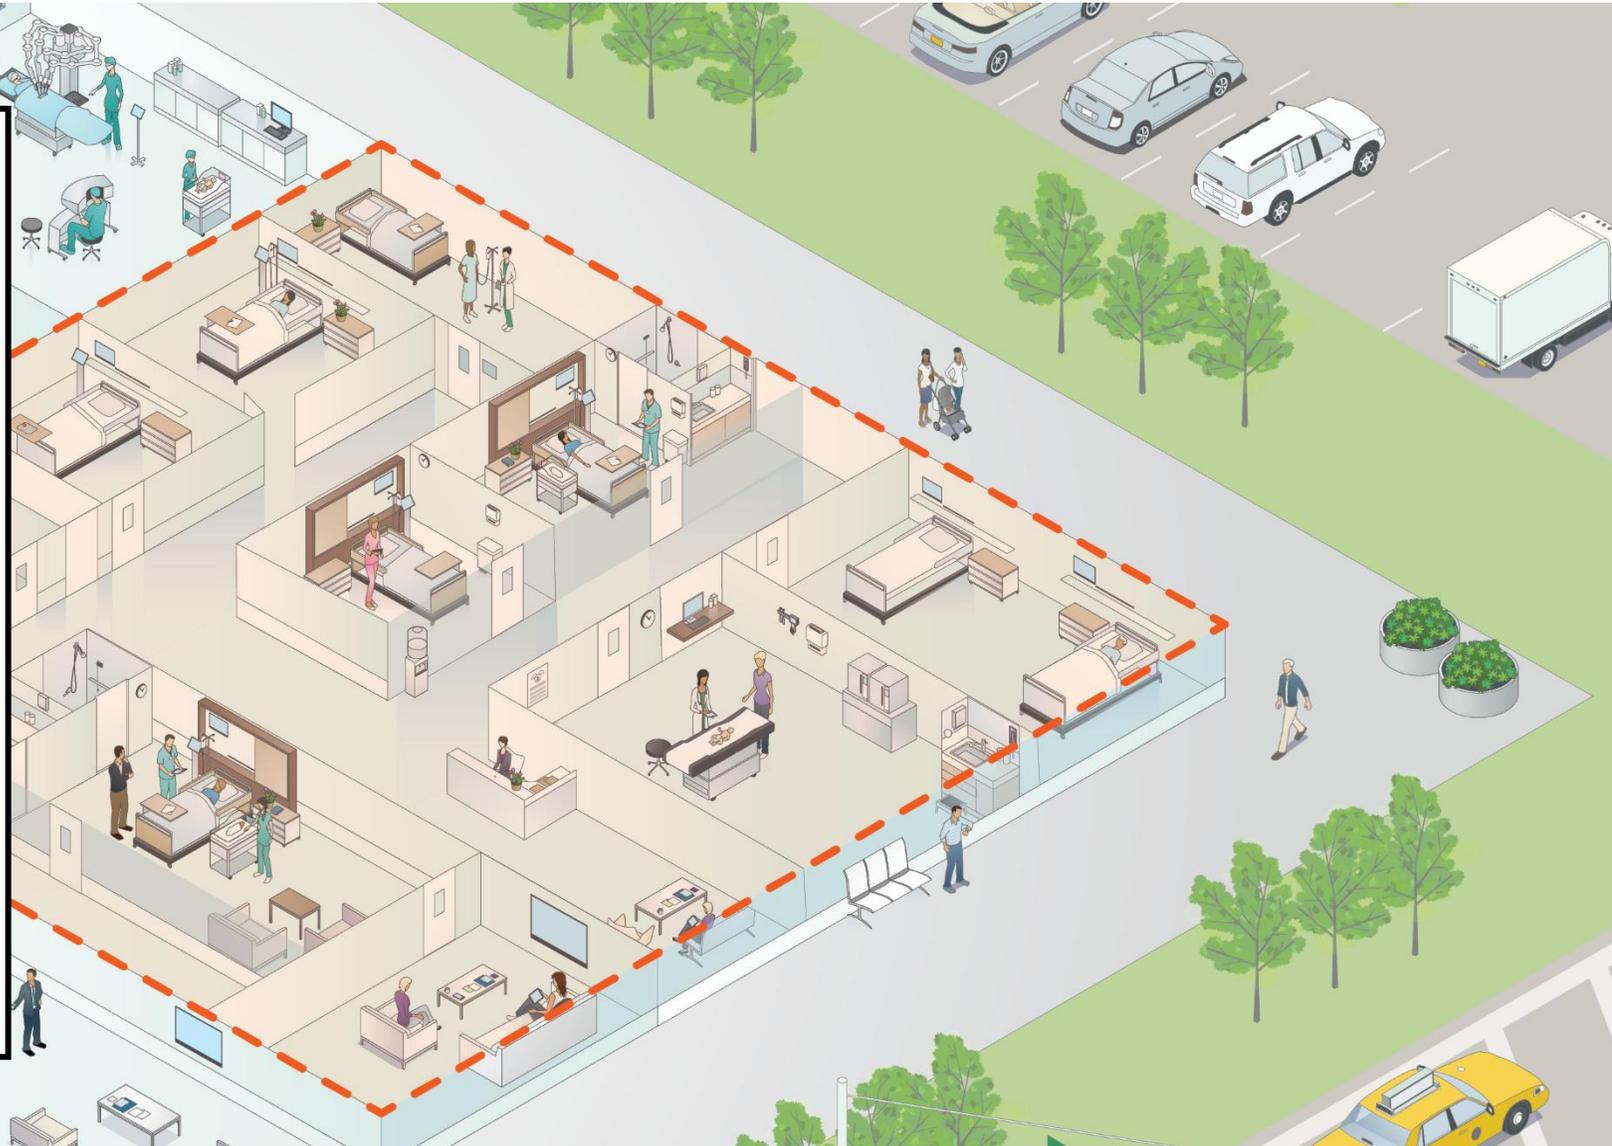

9 Increased security measures are taken with CCTV integration.

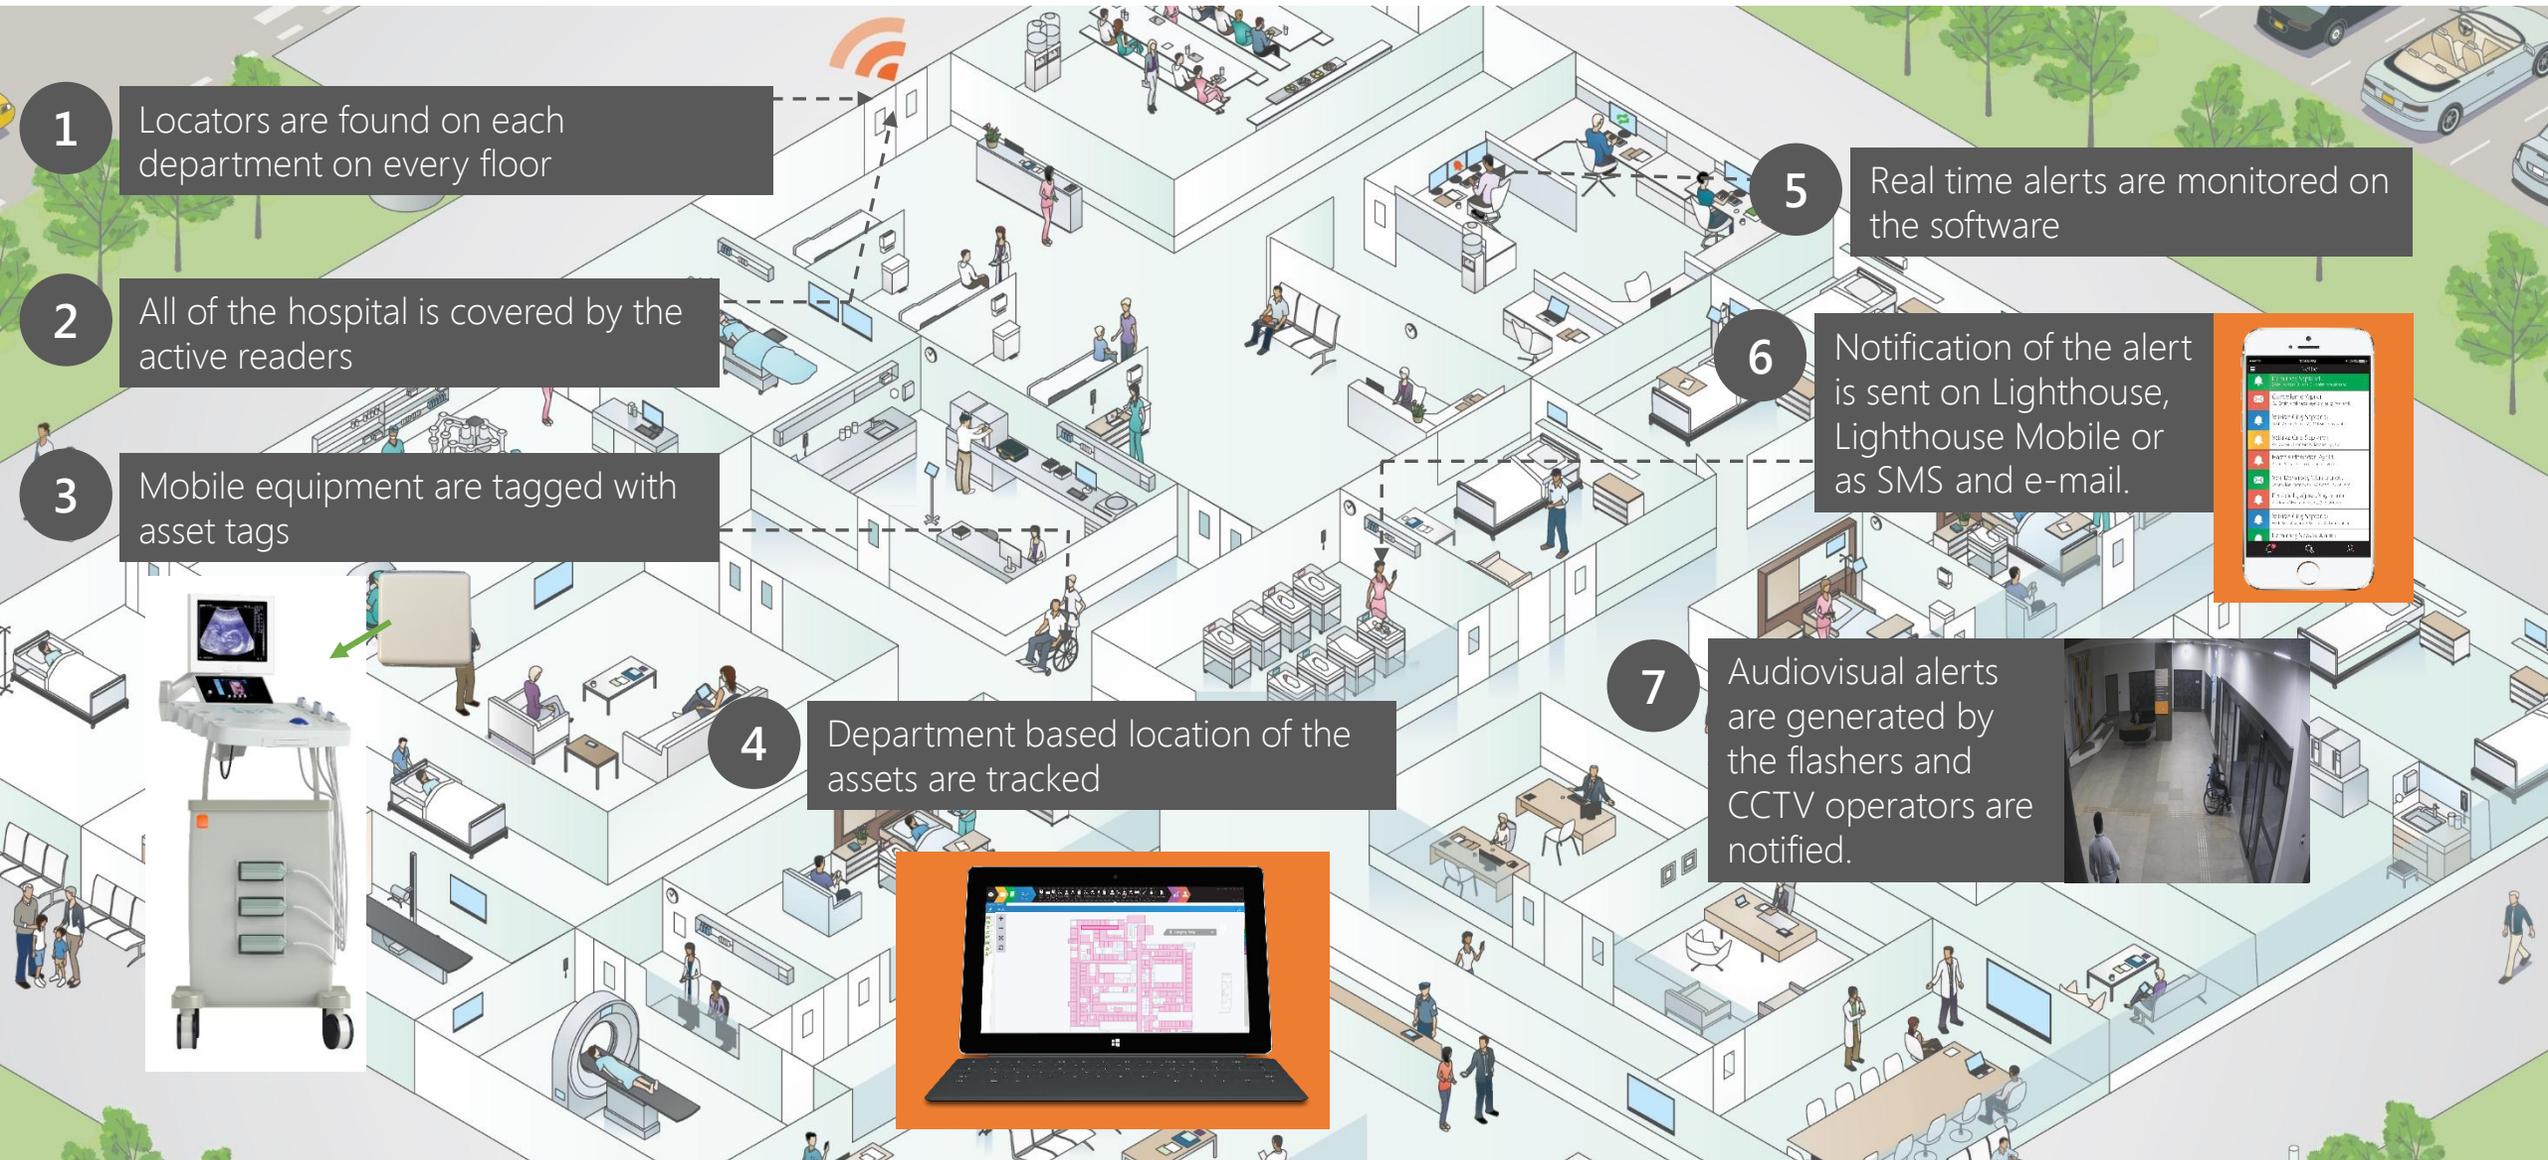

RTLS - Infant Safety

↘ On average, 25 babies are born every day

Alarm Detaylari

RTLS - Asset Safety

1 Locators are found on each department on every floor

2 All of the hospital is covered by the active readers

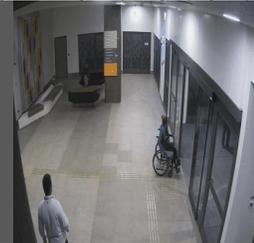

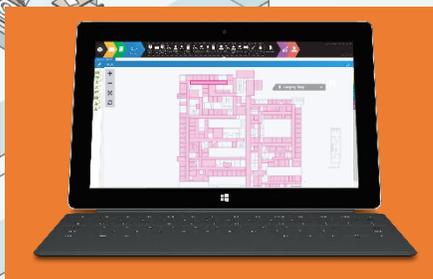

3 Mobile equipment are tagged with asset tags

4 Department based location of the assets are tracked

5 Real time alerts are monitored on the software

6 Notification of the alert is sent on Lighthouse, Lighthouse Mobile or as SMS and e-mail.

7 Audiovisual alerts are generated by the flashers and CCTV operators are notified.

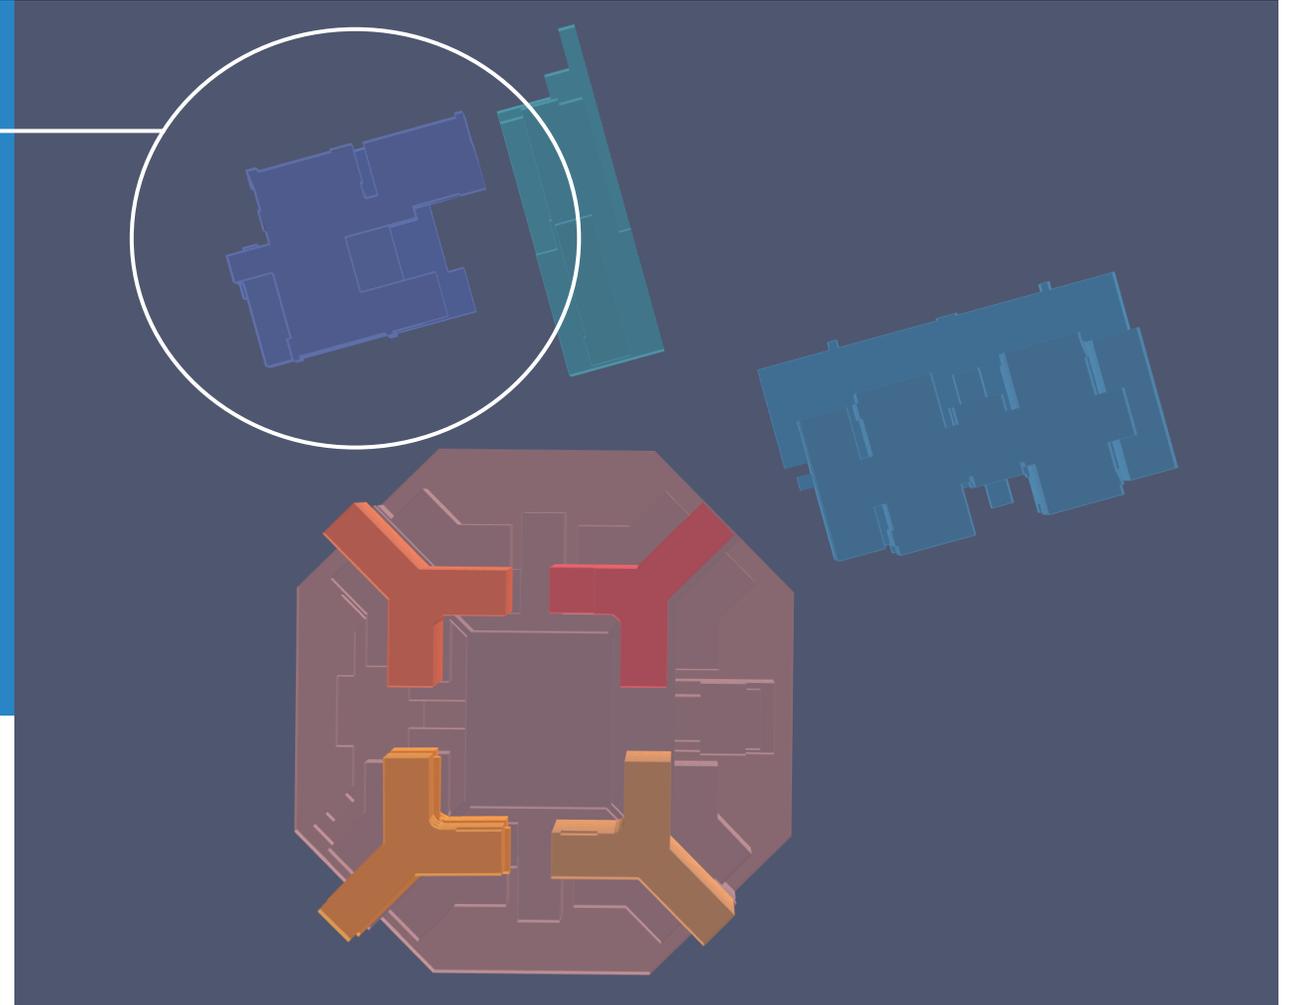

RTLS - Personnel Safety

HSFP Building

High Security Forensic Psychiatry
Hospital

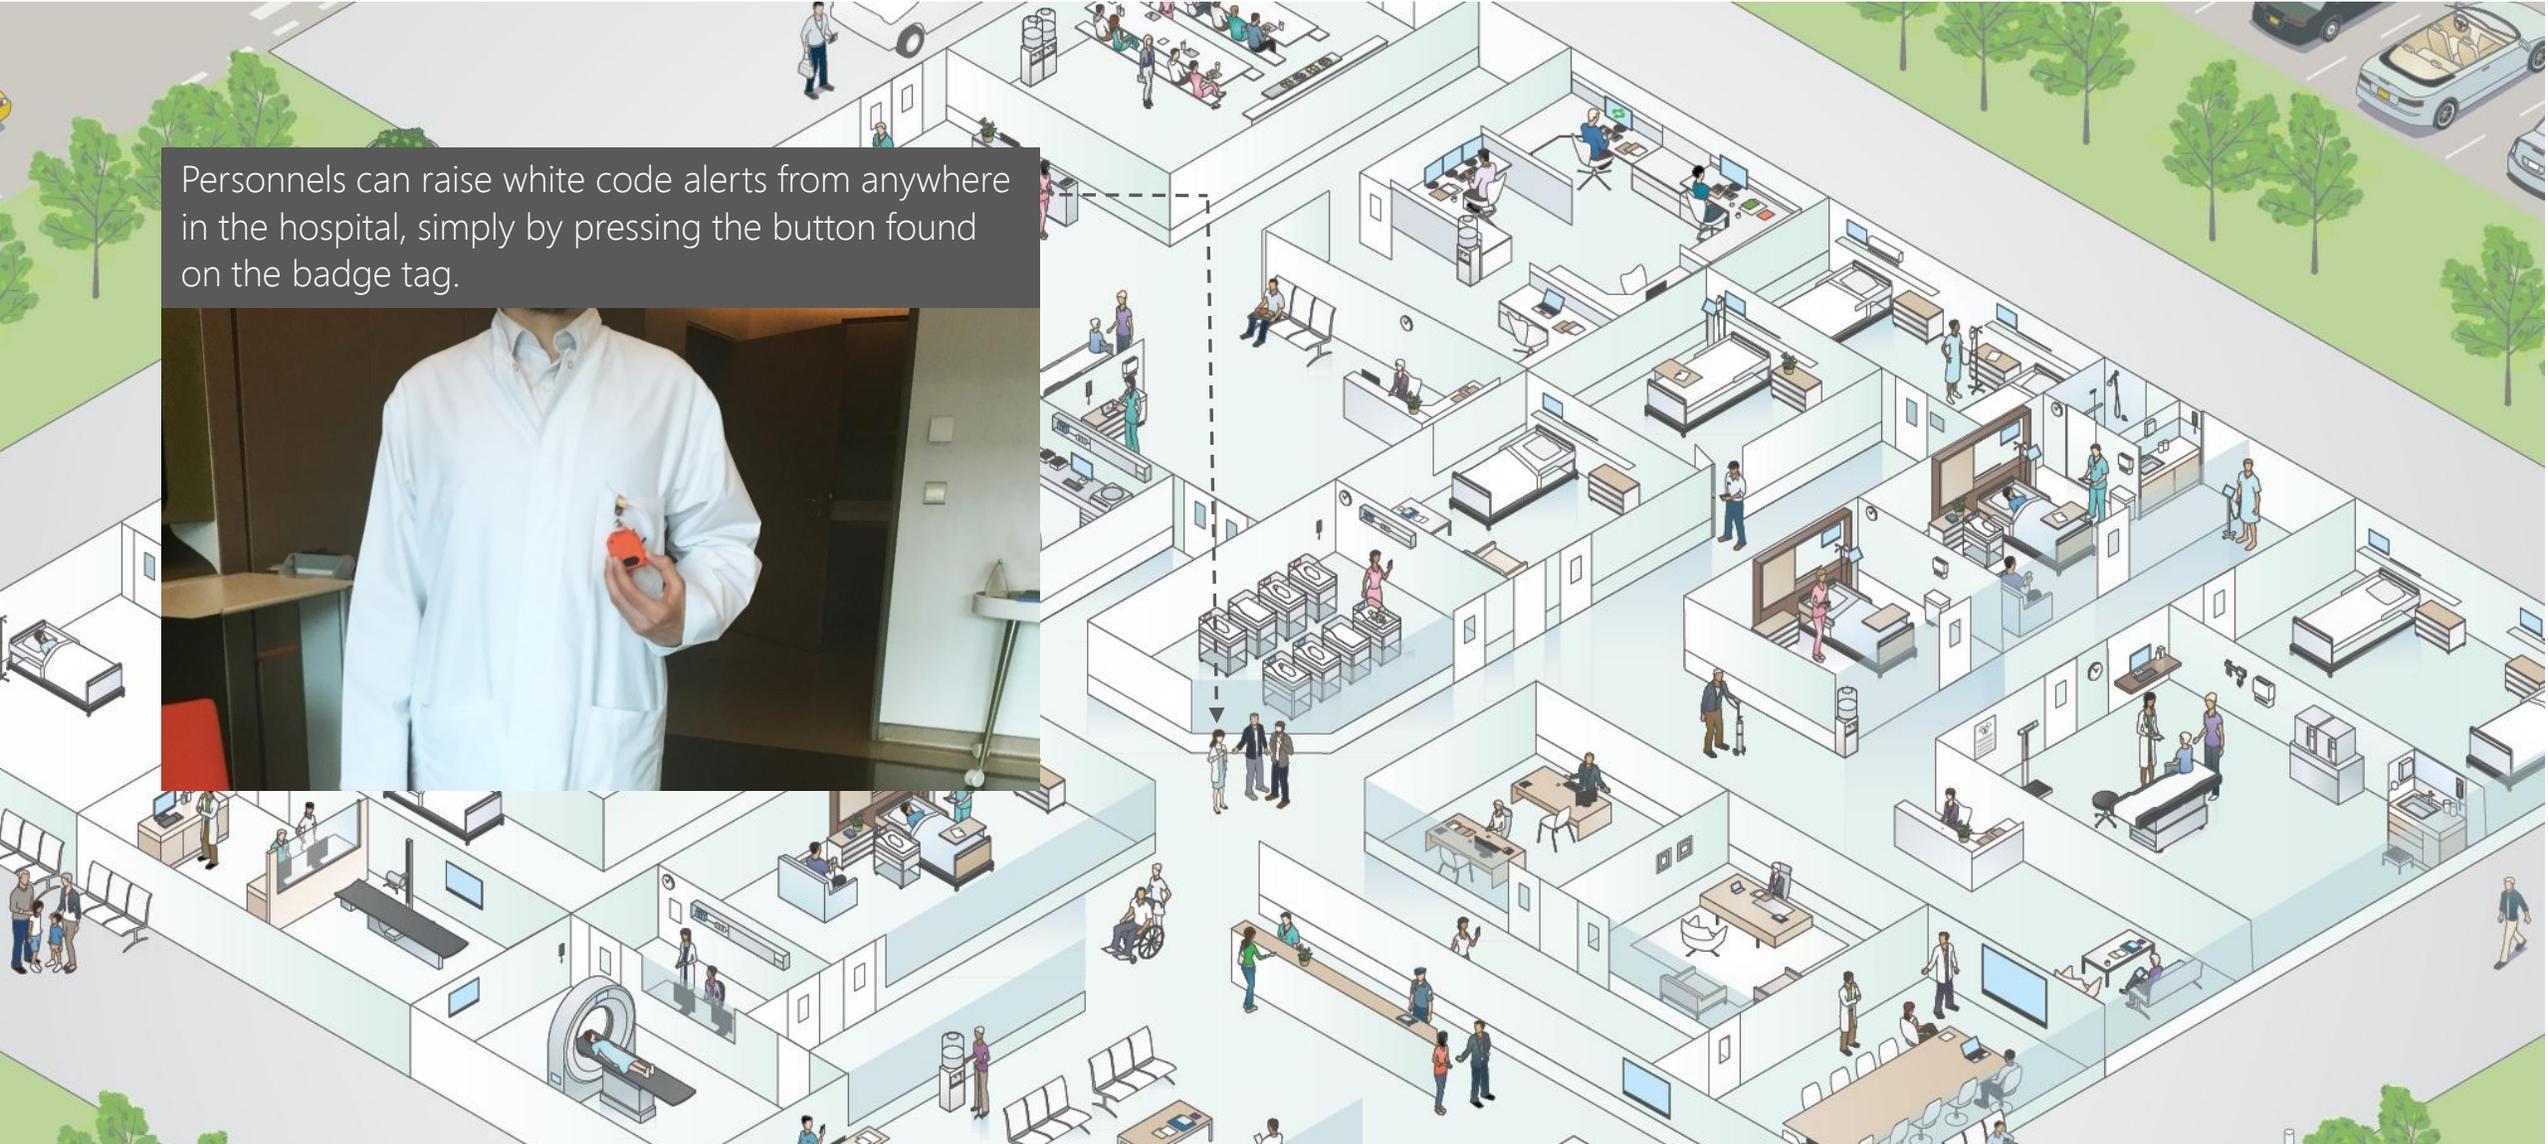

- Each doctor, nurse or personnel
is tagged with a badge tag

- 287 tags in total

RTLS - Personnel Safety

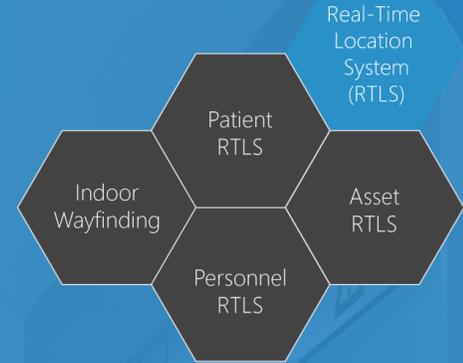

Personnels can raise white code alerts from anywhere in the hospital, simply by pressing the button found on the badge tag.

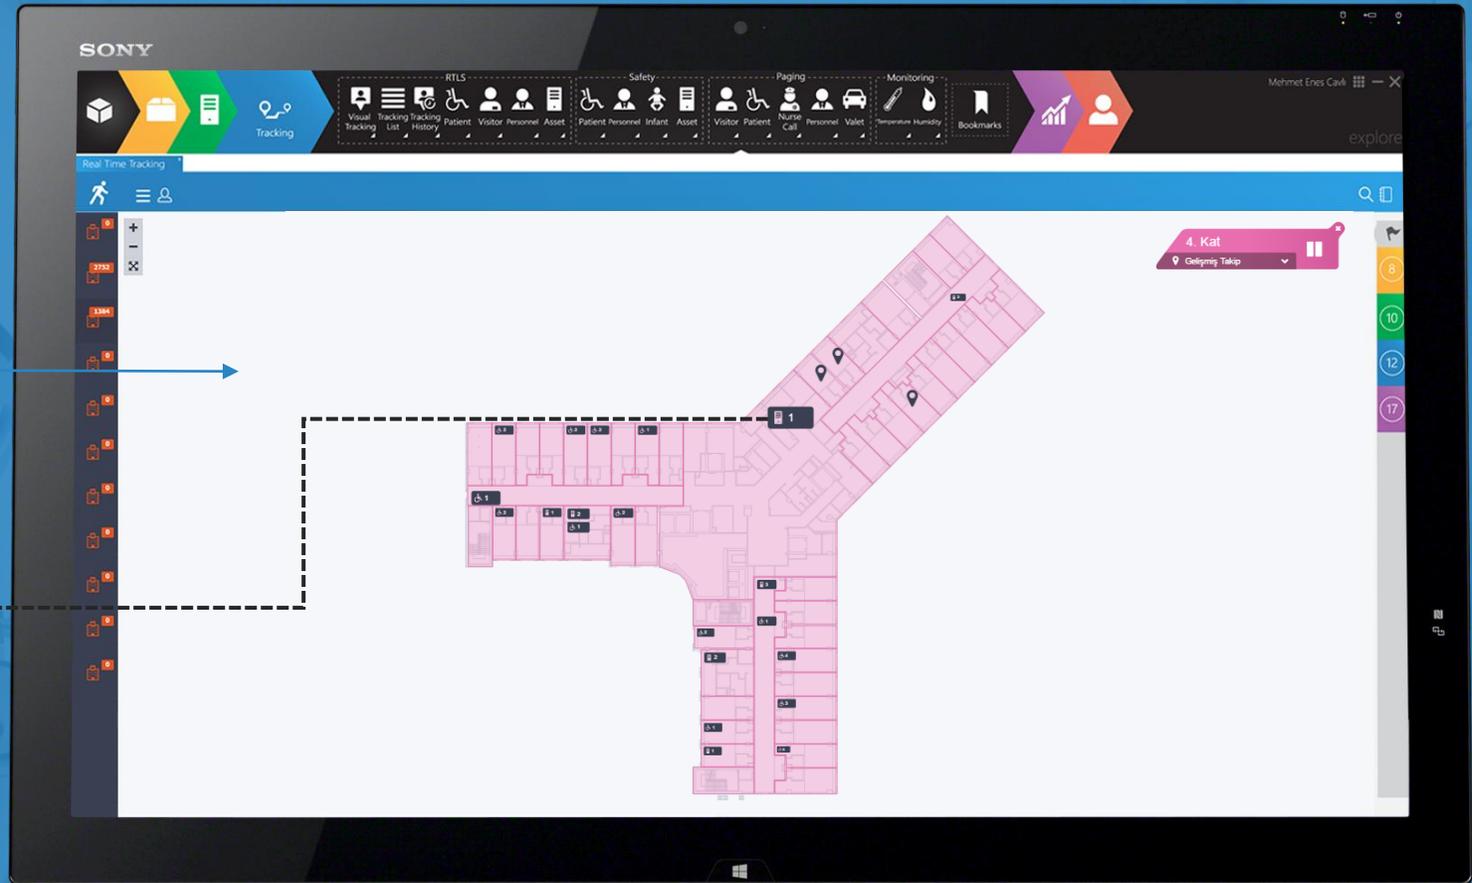

System Components

RTLS

how it works

RTLS - Patient Tracking

borda

RÖNESANS
SAĞLIK YATIRIM

The data of movements of people and objects is qualified

Business processes are observed

The uncertainties are eliminated

Data is formed for administrative decisions

Improvements are made in business processes

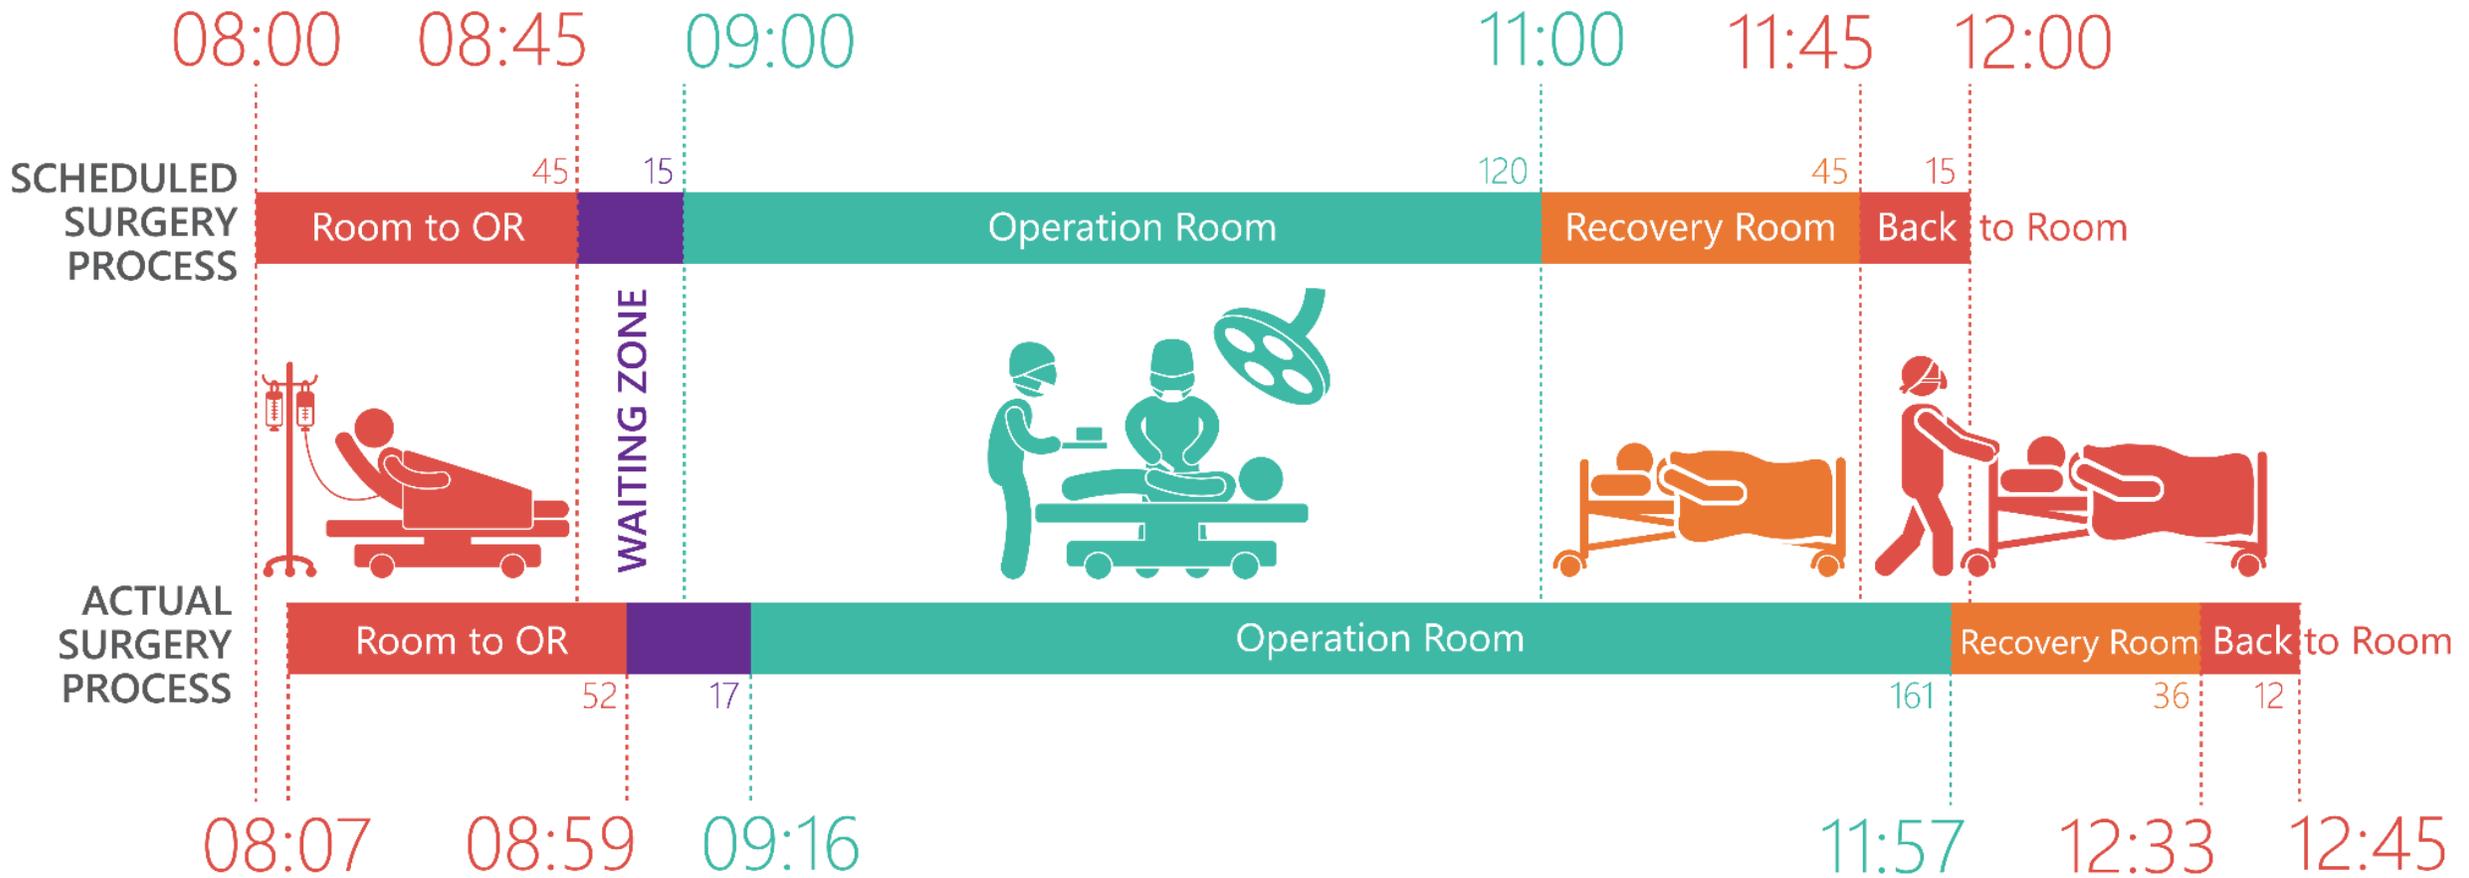

Automatic control of authorization constraints and business processes is done

Benefits of this solution:

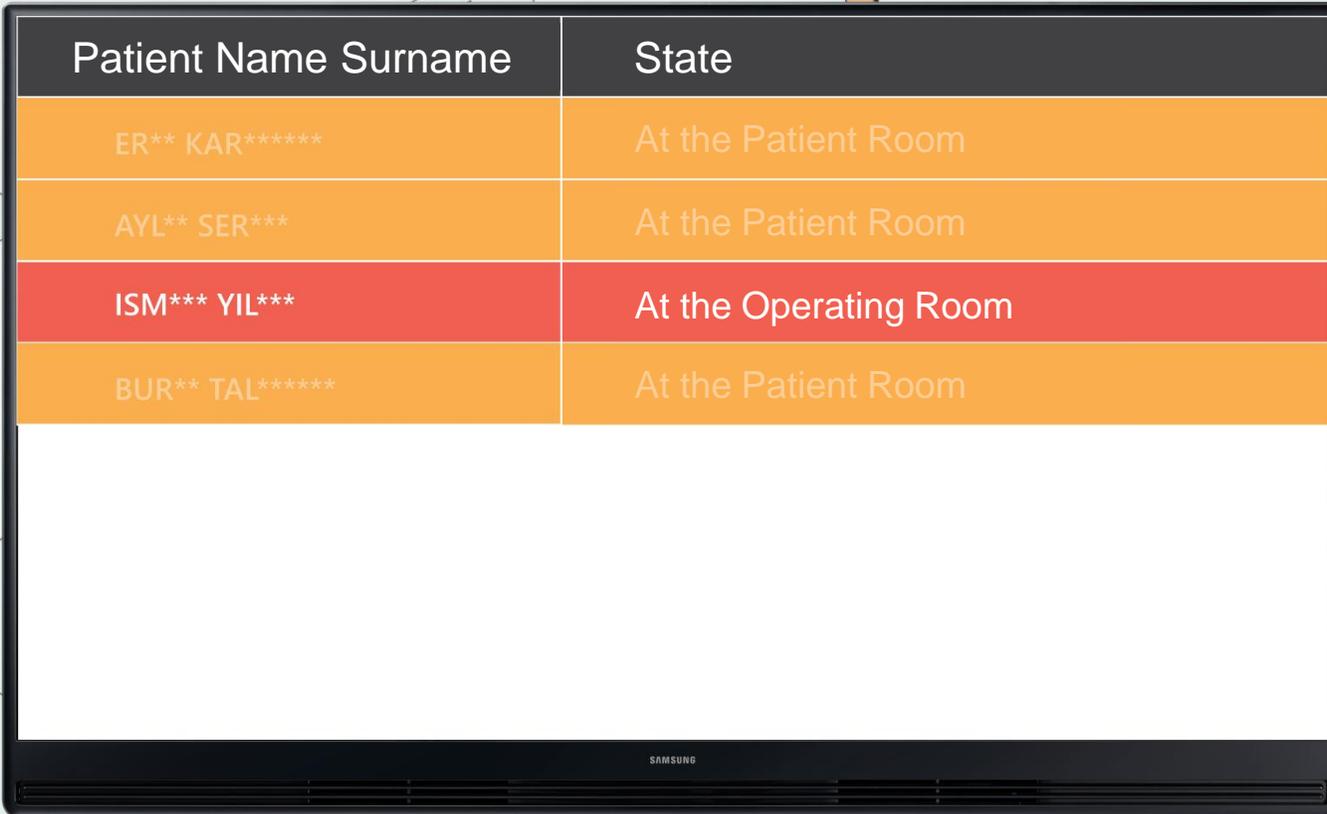

- ↘ Measurable processes
- ↘ Improved quality of healthcare
- ↘ Decreased cost

RTLS - Patient Tracking (Surgery Process)

RTLS - Patient Tracking (Surgery Process)

At the waiting areas, patient's relatives and friends may follow the state of the patient from the monitors that show real-time state of the patient.

Patient Name Surname	State
ER** KAR*****	At the Patient Room
AYL** SER***	At the Patient Room
ISM*** YIL***	At the Operating Room
BUR** TAL*****	At the Patient Room

RTLS - Patient Tracking (Surgery Process)

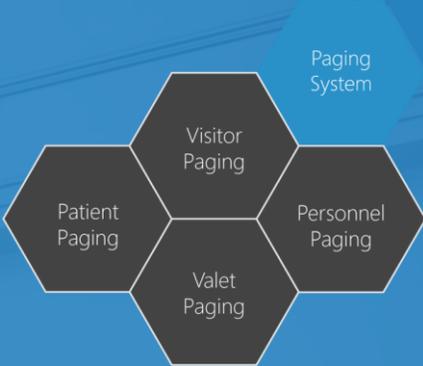

Lighthouse creates useful reports that help to:

- Clarify the spending time of the patient
- Reduce the waiting time and uncertainties.
- Increase patient and staff satisfaction.

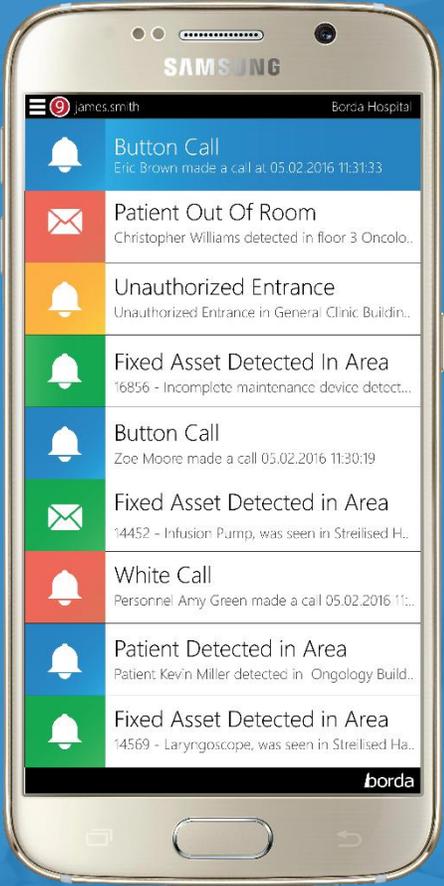

RTLS - Asset Tracking

System Components

how it works

PAGING Systems

RTTS

In the call notification; the caller's identity and location information is transmitted

So that the caller can be reached quickly

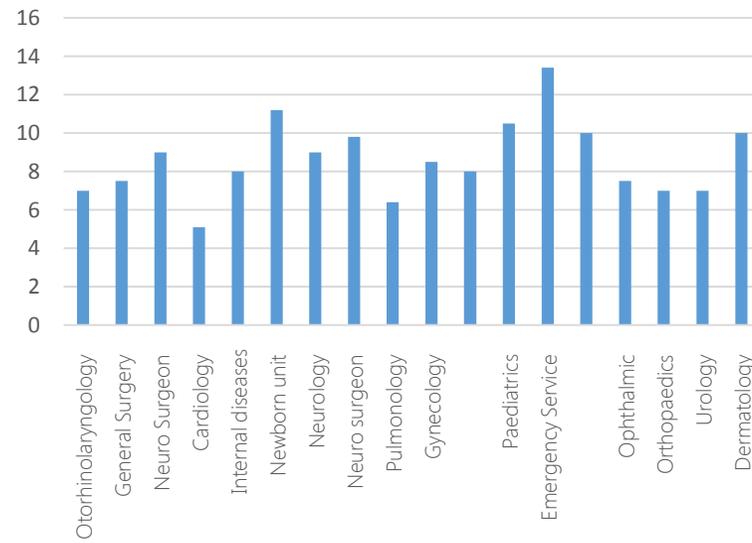

Calls are reported

The response times for the calls are evaluated on the basis of KPIs

#	Service	Nurse Room Average Utilization	Expected Average Response Time
1	Otorhinolaryngology	1,8 mins	2 mins
2	General Surgery	1.6 mins	1.5 mins
3	Neuro Surgeon	1.4 mins	2 mins
4	Cardiology	2.5 mins	2 mins
5	Internal diseases	31 secs	1 min
6	Newborn unit	10 secs	15 secs
7	Neurology	1 min	1 min
8	Neuro surgeon	28 secs	30 secs
9	Pulmonology	2 mins	2.5 mins
10	Gynecology	1 min	1 min
11	Child and Adolescent Psychiatry	8 secs	15 secs
12	Paediatrics	50 secs	1 min
13	Emergency Service	7 secs	15 secs
14	Physical Medicine and Rehabilitation	1 min	1,5 mins
15	Ophthalmic	2 mins	1,5 mins
16	Orthopaedics	2 mins	2 mins
17	Urology	1.5 mins	2 mins
18	Dermatology	1 min	1.5 min

Nurse Room Average Utilization (Service Basis)

- It makes sure that the hospital staff responds to patient calls in a timely manner
- The patients and visitors are waited in the stress free areas, such as the cafeteria, for the operation and are called in due course
- The patients and visitors do not waste time waiting for the vehicles, the vehicles will be at the door when they exit

System Components

The screenshot shows a Sony tablet displaying a data management interface. The interface includes a navigation bar with icons for home, users, location, alerts, and settings. The main content is a table with the following columns: #, Fixed Asset Code, Fixed Asset Name, Default Location, Sensor No, Last Read Temp., Last Read Time, and Average Temper... The table contains multiple rows of data. A blue circle highlights a specific row, and a red arrow points from this row to the photograph on the right.

#	Fixed Asset Code	Fixed Asset Name	Default Location	Sensor No	Last Read Temp...	Last Read Time	Average Temper...

Active RFID Tags

The Active RFID tags are capable of monitoring both temperature and humidity. Reading period may be set in the desired period. In this case, the periods are set at 5 minutes. Each tag has a unique temperature and humidity Türkak calibration certificates.

The QR code found on the tag, possess the tag information as well as the calibration certificates.

The sensor used for temperature and humidity measurements is in industrial category.

The Main Capability of The Solution

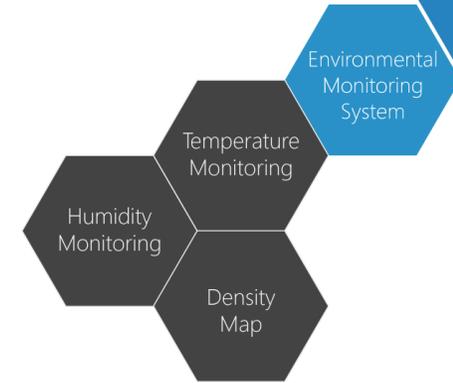

↘ Temperature and humidity are controlled automatically without interruption

↘ When the threshold is exceeded, an alarm is generated and the relevant personnel are informed

↘ Food is prevented from being adversely affected by the changes in temperature and humidity which cause rotteness.

↘ Hospital staffs do not have to check environmental values at certain periods and labor cost saving is ensured.

> Monitored Food Storage Locations

28 locations in total

- > Main Building: 6 locations
- > TUB: 20 locations
- > PTR: 1 locations
- > HSFP: 1 locations

> Monitored Food Storage Assets

2 assets in total

- > Fridge & Chiller : 2 adet

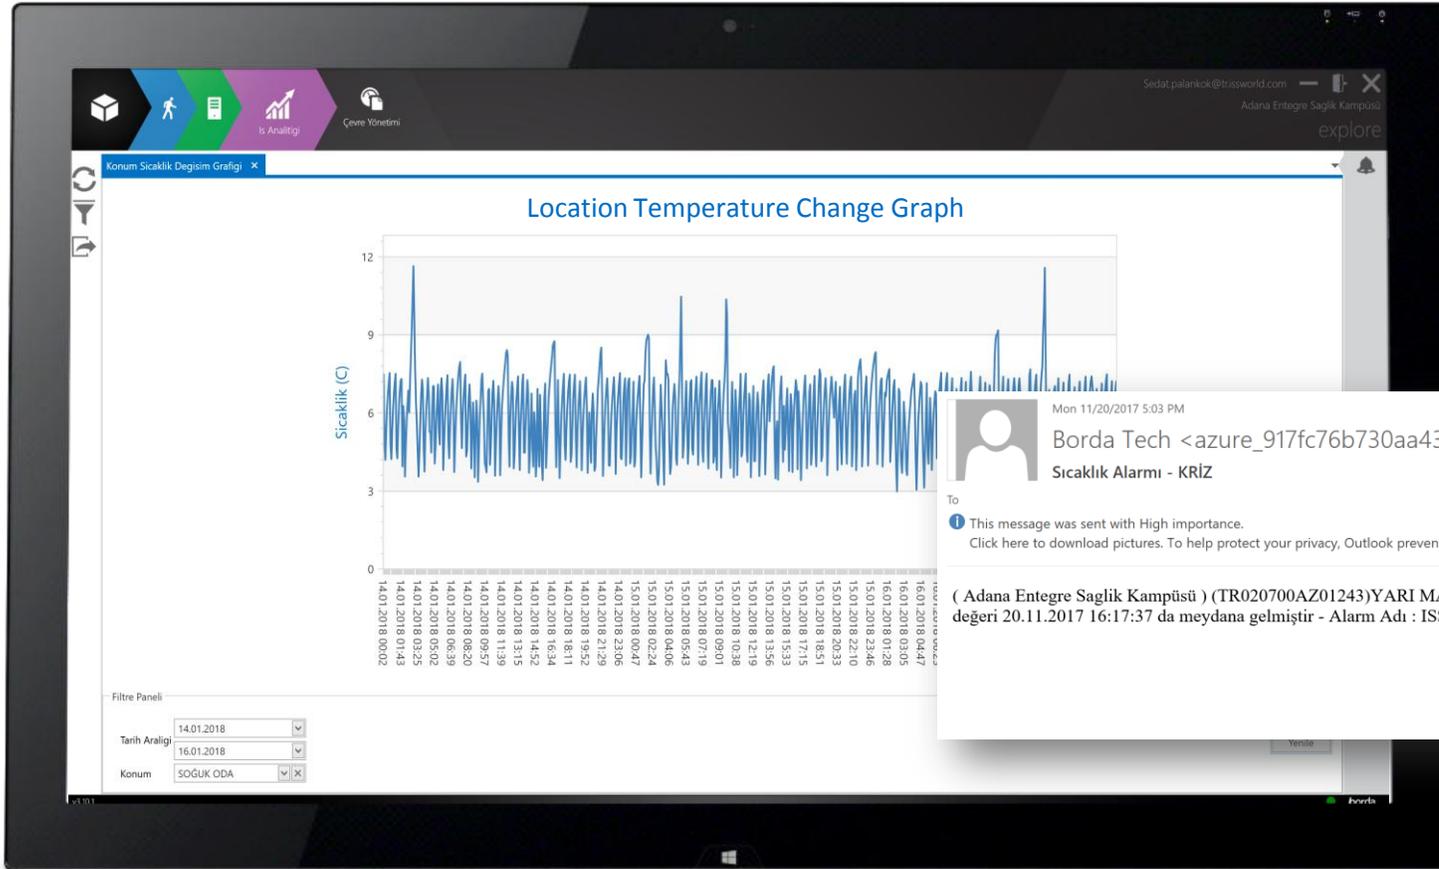

Changes in environmental conditions are reported in detail

Environmental values such as temperature and humidity are continuously and precisely controlled

An alarm is generated in the event of exceeding the threshold value and the related personnel are informed

(Adana Entegre Sağlık Kampüsü) (TR020700AZ01243)YARI MAMUL SOĞUK ODA konumu için sıcaklık alarmı. 12.43 sıcaklık değeri 20.11.2017 16:17:37 da meydana gelmiştir - Alarm Adı : ISS (+4 Depo Kriz).

System Components

Porter Services

Porter Services Personnel Tracking

- Each porter personnel has an active RFID badge tag, which provides the real time tracking of these personnels.
- Any personnel calls 5555 and demands a porter.
- Dispatcher assigns the demand to the nearest available porter personnel on Lighthouse.
- Porter personnel controls the work demand on Lighthouse Mobile.
